CR Adds Multi-Standard Presets to 232-STSi PAL TV Tuner

May 1, 2006 - Dallas, TX – Contemporary Research announces the addition of multi-standard preset tuning to the popular 232-STSi PAL Tuner. The new technology allows users to auto-tune broadcasts and save channel presets that mix and match different international standards. For example, a viewer in Germany (PAL B/G, A2 audio) can also save presets for Belgian broadcasts (PAL B/G, NICAM audio). Yacht and ship AV systems can now access TV presets that work in every port of call. Channel preset search, TV standard, add, and delete can be controlled from optional iC-RC wireless remote or RS-232 control system programming.

CR President Scott Hetzler, states, “Our international partners asked for a better solution for handling multi-standard presets that also allowed tuning of both A2 and NICAM stereo programs. We’ve responded, adding new auto-tuning and mixed-standard presets. The best news is that the new features can be added to any existing 232-STSi with a simple firmware upgrade.”

About Contemporary Research

Contemporary Research designs and creates solutions for an HDTV world, offering cutting-edge products HDTV display control, digital signage, and tuning. In addition, CR supports a proven line of analog TV tuners, closed-captioning tools, as well as commercial and educational media systems.
