

FOR IMMEDIATE RELEASE

Contemporary Research Releases Display Express 3.5 Display Control Software

DALLAS, January 8, 2009

Contemporary Research is pleased to announce Display Express 3.5, a new version of their display control software with significant, new capabilities. Features include Multi-Step control presets, Multi-Site operation, and new scheduling features. The Web-based software manages display control systems, and can integrate over a thousand displays through existing broadband cable. As system designers have discovered, HDTV is the most effective delivery medium for large-scale digital signage distribution. Display Express is a perfect partner for adding display management over RF.

With Multi-Step presets, a user can combine a number of display control presets into one. One button click can now turn on several groups of displays in a timed sequence, or send a series of commands to displays after a timed delay. Multi-Site operation adds the ability to communicate to a number of separate display systems, each driven by an Ethernet Head End – within one facility or across the county. The new software streamlines scheduling for those who manage many events, and adds Telnet commands for integrated operation with custom control systems.

About Contemporary Research

Contemporary Research designs and creates solutions for an HDTV world, offering cutting-edge products, HDTV display control, digital signage, and tuning. In addition, CR supports a proven line of analog TV tuners, closed-captioning tools, as well as commercial and educational media systems.
